

Klipboard AI[®]

Elevate Your Automotive Business with AI

Smarter service. Faster parts.
Better everyday decisions.

The Reality

Automotive teams work under constant pressure.

Workshops need to keep jobs moving. Parts teams need to identify components quickly and accurately. Service advisors need answers while customers are still on the phone.

But too much time is still lost:

- + Searching for the right information.
- + Checking availability and pricing.
- + Switching between systems.
- + Chasing updates across the workshop.

Individually, these delays seem small. Across a full day, they impact productivity, customer experience and workshop efficiency.

A More Practical Approach

Instead of searching across screens or manually cross-referencing information, teams can ask questions in plain language and get answers instantly, using the live operational data already inside their automotive systems.

No separate tools, no additional processes, just faster answers inside the workflows your team already uses every day.

Trust & Security

Trust	Security
Operates within your Klipboard environment.	Aligned with established product security and access controls.
Role-based permissions respected.	Users only see information they are already authorised to access.
Audit and governance maintained.	Existing compliance and control structures remain in place.
Embedded capability.	Built into Autowork One and AutoCat, not a third-party add-on.

How Klipboard AI Supports Automotive Teams

+ Find Parts Faster

Use vehicle details, service history and live operational data to identify relevant parts more quickly and reduce unnecessary delays.

+ Keep Workshops Moving

Help teams manage bookings, workloads and workshop activity with clearer day-to-day visibility.

+ Respond to Customers More Quickly

Answer questions around availability, pricing and service history while the customer is still on the phone.

+ Reduce Friction Across Everyday Work

Spend less time searching, checking and switching between systems – and more time progressing jobs.

+ Support Better Day-to-Day Decisions

Give teams quicker access to the information they need to work more confidently and consistently.

Ask Questions. Get Answers. Take Action.

- + "What brake pads fit this vehicle?"
- + "Which customers are overdue a follow-up?"
- + "What jobs are booked in tomorrow?"

Klipboard AI returns relevant answers instantly using live workshop and parts data – aligned to existing roles, permissions and controls.

Faster Answers. Smoother Workshops.

Small delays quickly add up in busy workshops.

Klipboard AI is designed to help automotive teams spend less time searching and more time progressing work – improving productivity, service and day-to-day efficiency without adding complexity.

Built for Real Automotive Workflows

Klipboard AI works inside the systems automotive businesses already rely on.

It supports experienced teams by helping them:

- + Find information faster.
- + Reduce manual effort.
- + Respond more confidently.
- + Keep work moving throughout the day.

Our promise

Klipboard AI will always be:

- + Practical.
- + Trustworthy.
- + Focused on helping automotive teams work more efficiently.
- + Introduced carefully as capabilities evolve.
