

Klipboard AI 

# AI for Rental: Your Rental business. Finally connected.

Smarter planning. Less downtime.  
Better day-to-day decisions.

## The Reality

Equipment rental teams operate in fast-moving environments.

Checking availability. Managing returns. Coordinating assets. Responding to customers. Planning jobs.

Too often, time is lost searching for information that should already be easy to access.

Across busy equipment rental operations, even small delays can impact utilisation, responsiveness and customer service.

## A More Practical Approach

Klipboard AI is embedded directly into OnRent Go.

Instead of manually checking systems or building reports, teams can ask questions in plain language and receive answers instantly – using live rental and operational data already inside the platform.

No separate systems, no additional complexity, just faster answers inside the workflows your team already uses every day.

## Trust & Security

Trust	Security
Operates within your Klipboard environment.	AI works within established product security and access controls.
Role-based permissions respected.	Users only see what they are already authorised to access.
Audit and governance maintained.	Existing compliance and control frameworks remain in place.
Embedded capability.	Built into OnRent Go, not a separate third-party add-on.

# How Klipboard AI Supports Rental Teams

## + Improve Asset Visibility

Understand what's available, what's in use and what's due back – across your fleet.

## + Respond Faster to Customers

Answer availability and booking questions while the customer is still on the phone.

## + Reduce Downtime

Identify utilisation patterns and operational bottlenecks earlier.

## + Support Smarter Planning

Give teams clearer visibility of assets, schedules and upcoming demand.

## + Keep Everyday Work Moving

Reduce delays caused by searching, checking and switching between systems.

## Ask Questions. Get Answers. Take Action.

- + "What assets are available next week?"
- + "Which equipment is due back tomorrow?"
- + "What are our most hired products this month?"

Klipboard AI returns relevant answers instantly using live rental data – aligned to existing roles, permissions and controls.

## Keep Work Moving.

Rental operations depend on visibility, responsiveness and utilisation.

Klipboard AI is designed to help teams reduce friction, improve day-to-day decision-making and keep assets working harder – without adding operational complexity.

# Built for Real Equipment Rental Operations

Klipboard AI works inside the systems rental teams already rely on.

It supports experienced teams by helping them:

- + Access information more quickly.
- + Reduce manual effort.
- + Improve visibility.
- + Respond more confidently throughout the day.

## Our promise

### Klipboard AI will always be:

- + Practical.
- + Trustworthy.
- + Focused on helping rental teams work more efficiently.
- + Introduced carefully as capabilities evolve.
