Built for Modern Fleet Tyre Operations

Managing tyre inspections across fleets, depots and service teams can quickly become difficult when reporting, inspections and maintenance activity are disconnected.

InfoRoute helps tyre service providers and fleet operators capture inspection data digitally, improve visibility across vehicles and prioritise corrective actions more efficiently.

Using the mobile inspection app and reporting portal, teams can record inspections in the field, monitor tyre health and support compliance workflows with clearer operational visibility.

Key outcomes

- + Improve fleet visibility**
Monitor fleet inspection activity, tyre performance and vehicle status across multiple depots and service locations.
- + Support compliance**
Create auditable digital inspection records and support DVSA, RSA and FORS compliance workflows.
- + Prioritise maintenance activity**
Identify faults faster, create work-to-do lists and manage urgent and scheduled corrective actions.
- + Reduce paper-based processes**
Capture tyre inspection data digitally using the mobile inspection app and cloud-based reporting tools.
- + Keep field and office teams connected**
Share fleet inspection visibility with connected reporting and cloud synchronisation.

Practical tools for fleet tyre management

Mobile inspection app

Record tyre inspections digitally with online and offline capability.

Multi-location fleet visibility

Manage multiple fleets and service locations through one connected platform.

Corrective action management

Track faults, prioritise urgent jobs and monitor work completion activity.

Connected integrations

Integrate injection data with tyre manufacturer systems, fleet software and Translogik tools.

Built for Connected Fleet Operations

InfoRoute helps tyre service providers and fleet operators improve visibility across inspections, maintenance activity and fleet tyre performance.

By connecting mobile inspections, reporting and corrective action management into one operational environment, InfoRoute helps teams work more efficiently while supporting safer, more compliant fleet operations.
