

ePOS

Fast, reliable point-of-sale built for high-volume retail

ePOS is a purpose-built point-of-sale solution designed for retailers and wholesalers who need speed, reliability and simplicity at the till.

It separates front-of-house sales from back-office processing, allowing the POS to focus on what matters most: scanning items, completing transactions and serving customers quickly.

Meanwhile, ERP One manages pricing, stock, promotions and financial processing in the background.

The result is faster transactions, shorter queues and stronger operational control across every store.

Built for Fast-Moving Retail Environments

ePOS is designed to handle busy trading conditions without slowing down staff or customers.

+ Fast Scan / Pay / Go transactions

Quick scanning and simple basket management keep queues moving during peak trading periods.

+ Simple for staff to learn and use

An intuitive interface reduces training time and helps staff operate confidently, even during busy shifts.

+ Reliable even during connectivity issues

Offline cash transaction capability ensures stores can continue trading even if network connections drop, with automatic resynchronisation once connectivity returns.

Strong Operational Controls

ePOS provides built-in controls to support secure, consistent store operations.

+ Role-based user permissions

Secure login and supervisor approval ensure discounts, refunds and price changes are properly controlled.

+ Cash drawer management

Structured opening and closing processes help identify discrepancies and reduce operational risk.

+ Controlled returns and exchanges

Returns can be processed quickly using the original receipt while maintaining approval controls where required.

Designed for Everyday Retail Operations

ePOS includes the practical tools retail teams rely on every day.

+ Product search and basket management

Staff can quickly find products, browse categories and adjust quantities during a transaction.

+ Promotions and discounts

Offers such as loyalty discounts, quantity deals and vouchers are applied automatically.

+ Flexible payment handling

Supports cash, store credit and gift cards.

+ Customer-facing display

Customers can view their items and pricing in real time and confirm details such as email addresses for digital receipts.

+ Reporting and store visibility

Managers can access daily and weekly store activity through the central reporting system.

Integrated with ERP One

ePOS works alongside ERP One, which continues to manage pricing, promotions, stock and financial processing.

This clear separation ensures:

- + Faster front-of-house transactions
- + Accurate sales and stock updates
- + Consistent pricing and promotions
- + Better visibility for head office

Key Benefits

-  Faster transactions and shorter queues
-  Simple training for new staff
-  Reliable operation during connectivity issues
-  Stronger cash and refund controls
-  Accurate sales data synchronised with ERP One

Whether operating a single store or multiple locations, ePOS helps retail teams **serve customers faster, operate with confidence and maintain control during busy trading periods.**
